Software Engineer (Application Developer)

Description

Join a modernization effort to refactor outdated applications. This role focuses on full-stack development, refactoring legacy code, improving security, and supporting system maintainability for high-impact agricultural systems.

Qualifications

Mandatory Qualifications

8+ years of software development experience, including:

Full-stack application development using .NET (Framework/Core)

Legacy code upgrades from Classic ASP or .NET 2.x/4.x

Implementing encryption, access controls, and secure data practices

SQL Server design, optimization, and secure data storage

Collaborating on code-level security fixes

Desirable Qualifications

Master's degree in Computer Science

5+ years developing in PowerApps and Power BI

8+ years using Azure DevOps or equivalent tools

15+ years of C#/.NET and MVC architecture development
